Data scientist with an economics PhD. I build and evaluate statistical and machine-learning models on structured data — econometrics, model validation, calibration, and uncertainty quantification — and turn results into decisions stakeholders act on. Currently at AXA.

EXPERIENCE

Data Scientist, AXA Konzern AG

Apr. 2026 – present

Cologne, Germany

- Work on a production document-understanding pipeline that segments stacks of scanned pages into documents (boundary detection) and classifies each — hundreds of thousands of stacks per month — flagging low-confidence cases for human review.
- Built document-class-specific confidence thresholds that automate more documents while holding at least 95% precision per class, cutting manual review by around 30% in production.
- Researching pipeline upgrades: an LLM post-processing step for frequently-confused class pairs, and a single vision-language model (Qwen3.5-4B) to replace the existing two-stage BERT+CLIP and RNN stack.

Postdoctoral Researcher in Economics, University of Bonn

Jan. 2022 – Mar. 2026

Bonn, Germany

- Ran empirical and computational economics research — statistical and econometric modeling, machine-learning benchmarking, and partial-identification with simulation.
- Developed theoretical models and built reproducible analysis pipelines in Python and R; benchmarked economic theories against machine-learning models to quantify how much predictable variation each captures.
- Published peer-reviewed research and presented at international conferences.

Research Assistant in Economics, University of Cologne

Dec. 2015 – Dec. 2021

Cologne, Germany

- Conducted PhD research in microeconomic theory and experimental economics — decision-theory and contract-theory modeling, with empirical analysis of experimental data.

Intern, AirPlus International

Dec. 2014 – May 2015

Neu Isenburg, Germany

- Built VBA tools for data management and process automation.

EDUCATION

PhD in Economics (Dr. rer. pol.)

2015 – 2021

University of Cologne — Summa cum laude

MSc International Economics & Public Policy

2012 – 2014

University of Mainz — GPA 1.6

BA Financial Management & Services

2008 – 2012

Copenhagen Business Academy

SELECTED PROJECTS

CitiBike Demand, Risk & Net Flow

Operational analysis

A per-trip crash-risk measure for a bike-share network — NYPD collisions over trip exposure, empirical-Bayes smoothed — usable as an insurer rating input, with demand patterns and a net-flow classifier for rebalancing.

Python · pandas · GeoPandas · risk analysis

Frequency-Report Scoring Rules

Inference & simulation

Belief elicitation recast as partial identification: characterized the identified set of beliefs behind each frequency report under three scoring rules and compared the sharpness of their bounds, validated by simulation.

Python · simulation · pytest

Economic Theories & Machine Learning

Model comparison

Benchmarked theory-based behavioral specifications against machine-learning models to measure how much of the predictable variation in choice data each theory actually captures.

Python · scikit-learn · model evaluation

RAG Search Engine

Retrieval system

Hybrid search combining BM25, embeddings, CLIP, and reciprocal-rank fusion with reranking and RAG answers, evaluated on precision, recall, and F1 against a golden set.

Python · embeddings · CLIP · evaluation

TEACHING

University lecturer and tutor in applied, behavioral, and organizational economics; supervised 60+ bachelor's and master's theses.

Seminar on Current Topics in Microeconomics

2025 – present

Undergraduate lecturer

Research Module on Applied Microeconomics & Management

2022 – 2025

Graduate lecturer

Empirical Evaluation of Management Practices

2019 – 2022

Graduate lecturer

Behavioral Management Science

2017 – 2020

Undergraduate lecturer
